(54) Telephone transmitting/receiving unit and mobile communication terminal

(57) A telephone transmitting/receiving unit (24) comprising an electronic circuit having a function of converting a signal received by an antenna (22,42) to signal to be output by a speaker (58), a function of converting a voice signal input by a microphone (60) to a signal to be output by the antenna (22), a function of performing prescribed processing based on a signal from an operational unit (70), a function of generating a signal to be displayed in a display unit (20), a cartridge (28) for removable loading in a slot (26) formed in a mobile communication terminal (10,78,88,94), and an input/output unit (30) for inputting/outputting a signal to/from the mobile communication terminal. The telephone transmitting/receiving unit (24) is loaded in the mobile communication terminal (10,78,88,94), whereby mobile communication can be performed by the use of the mobile communication terminal. The telephone transmitting/receiving unit (24) is applicable to various types of mobile communication terminals, so that mobile communication can be provided suitable to a time, place and occasion without employing a plurality of circuits but by employing a single circuit.

### CLAIMS INCURRING FEES

The present European patent application comprised at the time of filing more than ten claims.

- ☐ Only part of the claims have been paid within the prescribed time limit. The present European search report has been drawn up for the first ten claims and for those claims for which claims fees have been paid, namely claim(s):
- ☐ No claims fees have been paid within the prescribed time limit. The present European search report has been drawn up for the first ten claims.

### LACK OF UNITY OF INVENTION

The Search Division considers that the present European patent application does not comply with the requirements of unity of invention and relates to several inventions or groups of inventions, namely:

see sheet B

- ☐ All further search fees have been paid within the fixed time limit. The present European search report has been drawn up for all claims.
- ☐ As all searchable claims could be searched without effort justifying an additional fee, the Search Division did not invite payment of any additional fee.
- ☐ Only part of the further search fees have been paid within the fixed time limit. The present European search report has been drawn up for those parts of the European patent application which relate to the inventions in respect of which search fees have been paid, namely claims:
- ☒ None of the further search fees have been paid within the fixed time limit. The present European search report has been drawn up for those parts of the European patent application which relate to the invention first mentioned in the claims, namely claims:

LACK OF UNITY OF INVENTION  
SHEET B

Application Number

EP 98 20 2094

The Search Division considers that the present European patent application does not comply with the requirements of unity of invention and relates to several inventions or groups of inventions, namely:

1. Claims: 1-6

Telephone radiofrequency transmitting and receiving module  
which can be inserted in a personal handy phone, a personal  
digital assistant or portable computer for providing  
wireless communications

2. Claims: 7,8

Communication service system for receiving data
